

Quality and Technical Compliance

At SARET, we pride ourselves on a longstanding reputation for quality—in our people, our processes, and the materials and services we deliver to our customers.

Quality is a differentiator for SARET and has been a cornerstone of our success over the past 110 years.

Quality in the Construction business is measured by how well a facility or unit is designed and how well it performs over its life. These characteristics depend heavily on the abilities of our suppliers and contractors to provide best in class equipment, materials and services.

Suppliers and contractors are responsible to provide equipment, materials and services that meet all technical requirements of the contract specifications, including all applicable industry codes, standards, permits, and licenses.

This means that all equipment and materials arriving on our project sites is defect free and the workmanship of contractors meets the highest industry standards.

As part of our attention to quality, all equipment and material suppliers and subcontractors are evaluated during and after each contract with SARET.

A quality performance rating is recorded in our system for future reference giving us visibility to the best performing companies we have used in the past.

SARET prides itself on quality work. We insist on the same high industry standards from our suppliers and contractors.
